Summary

Test #	Test Procedure	Parameters	Expected Outcome	Actual Outcome	Pass / Fail
TCP_T1	Send data back and forth through port forwarder	“Hello” from Client to Server. “Hello Back” from Server to Client	Message Sends and Transfers Successfully	Message Sends and Transfers Successfully	Pass
UDP_T1	Send data back and forth through port forwarder. Creates new record	“Hello” from Client to Server. “Hello Back” from Server to Client	Message Sends and Transfers Successfully	Message Sends and Transfers Successfully	Pass
UDP_T2	Send data back and forth through port forwarder with existing record	“Hello” from Client to Server. “Hello Back” from Server to Client	Message Sends and Transfers Successfully	Message Sends and Transfers Successfully	Pass
SSH_T1	Connect to SSH server through port forwarder	N/A	Connection Establishes, functions and disconnects successfully	Connection Establishes, functions and disconnects successfully	Pass
SSH_T2	Connect to non-existent SSH server through port forwarder	N/A	Connection fails to connect. User gets prompt of failed connection. Server Resets	Connection fails to connect. User gets prompt of failed connection. Server Resets	Pass
HTTP_T1	Connect to HTTP server through port forwarder	N/A	Connection Establishes, functions and disconnects successfully	Connection Establishes, functions and disconnects successfully	Pass
HTTP_T2	Connect to non-existent HTTP server through port forwarder	N/A	Connection fails to connect. User gets prompt of failed connection. Server Resets	Connection fails to connect. User gets prompt of failed connection. Server Resets	Pass
TELNET_T1	Connect to	N/A	Connection	Connection	Pass

	Telnet server through port forwarder		Establishes, functions and disconnects successfully	Establishes, functions and disconnects successfully	
TELNET_T2	Connect to non-existent Telnet server through port forwarder	N/A	Connection fails to connect. User gets prompt of failed connection. Server Resets	Connection fails to connect. User gets prompt of failed connection. Server Resets	Pass
SSL_T1	Connect to SSL server through port forwarder	N/A	Connection Establishes, functions and disconnects successfully	Connection Establishes, functions and disconnects successfully	Pass
SSL_T2	Connect to non-existent SSL server through port forwarder	N/A	Connection fails to connect. User gets prompt of failed connection. Server Resets	Connection fails to connect. User gets prompt of failed connection. Server Resets	Pass
SFTP_T1	Connect to SFTP server through port forwarder	N/A	Connection Establishes, functions and disconnects successfully	Connection Establishes, functions and disconnects successfully	Pass
SFTP_T2	Connect to non-existent SFTP server through port forwarder	N/A	Connection fails to connect. User gets prompt of failed connection. Server Resets	Connection fails to connect. User gets prompt of failed connection. Server Resets	Pass
GUI_T1	Load with Mappings in DB	N/A	GUI Loads in Mappings as existing mappings	GUI Loads in Mappings as existing mappings	Pass
GUI_T2	Load with no Mappings in DB	N/A	GUI Loads and does no load any mappings as none exist	GUI Loads and does no load any mappings as none exist	Pass
GUI_T3	Create a UDP Mapping	N/A	UDP Mapping is Created and	UDP Mapping is Created and	Pass

			Connections can connect to new port	Connections can connect to new port	
GUI_T4	Create a TCP Mapping	N/A	TCP Mapping is Created and Connections can connect to new port	TCP Mapping is Created and Connections can connect to new port	Pass
GUI_T5	Delete a UDP Mapping	N/A	UDP Mapping is Deleted and Connections cannot connect to the old port	UDP Mapping is Deleted and Connections cannot connect to the old port	Pass
GUI_T6	Delete a TCP Mapping	N/A	TCP Mapping is Deleted and Connections cannot connect to the old port	TCP Mapping is Deleted and Connections cannot connect to the old port	Pass

Results

All original images can be found in the /doc/tests folder under their appropriate test# folder name

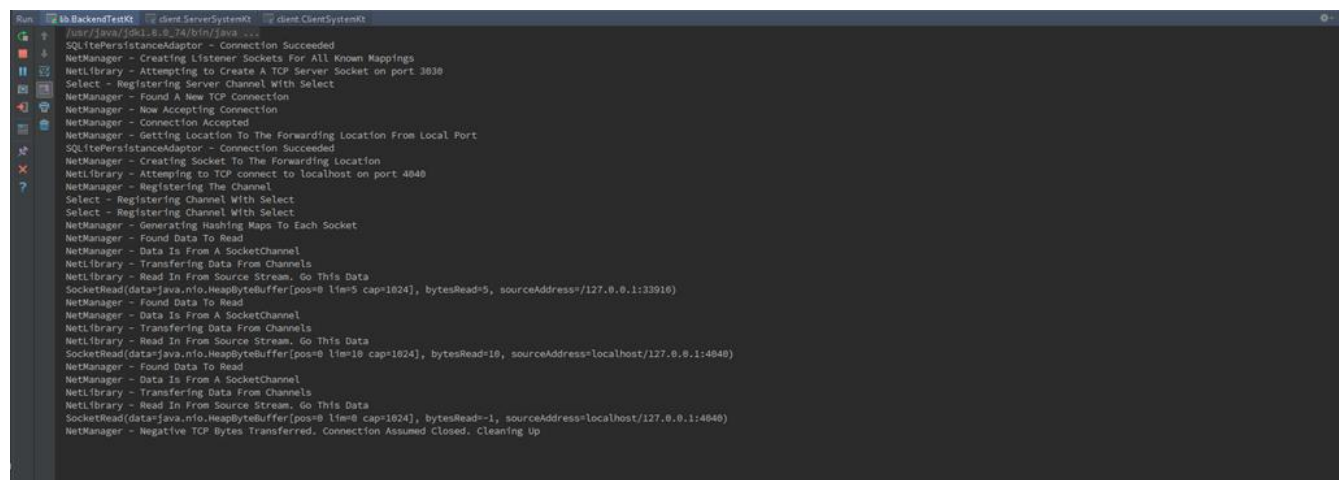

TCP_T1

```
Run: lib.BackendTestKt client.ServerSystemKt client.ClientSystemKt
/usr/java/jdk1.8.0_74/bin/java ...
Starting Server
HELLO
Server Received : 5
Server Sending Back
Process finished with exit code 0

HTTP_T1

Client

This page is used to test the proper operation of the Apache HTTP server after it has been installed. If you can read this page, it means that the server is working properly.

If you are a member of the general public:

The fact that you are seeing this page indicates that the website you just visited is either experiencing problems, or is undergoing routine maintenance.

If you would like to let the administrators of this website know that you've seen this page instead of the page you expected, you should send them e-mail. In general, mail sent to the name "webmaster" and directed to the website's domain should reach the appropriate person.

For example, if you experienced problems while visiting www.example.com, you should send e-mail to "webmaster@example.com".

Fedora is a distribution of Linux, a popular computer operating system. It is commonly used by hosting companies because it is free, and includes free web server software. Many times, they do not set up their web server correctly, and it displays this "test page" instead of the expected website.

Accordingly, please keep these facts in mind:

- Neither the Fedora Project or Red Hat has any affiliation with any website or content hosted from this server (unless otherwise explicitly stated).
- Neither the Fedora Project or Red Hat has "hacked" this webserver. This test page is an included component of Apache's httpd.

Mapping
